The DPD cDNA can be inserted into a vector and used for prodn. of active DPD (AAR91421) in transformed host cells, e.g. Escherichia coli, or used as a selectable marker functional in prokaryotic and eukaryotic cells. It can also be utilised as a probe to detect DPD deficiency in an individual, i.e. to identify risk of toxic reaction to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           genes and

The invention is used for electronic detection of nucleic acids, especially of substitutions (mismatches) and single-nucleotide polymorphisms, e.g. for genotyping, monitoring gene expression.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Result No.

Determination of this BAC-end sequence was carried out as part of a
collaboration with the Berkeley Drosophila Genome Project (BDGP).
The BDCP is constructing a physical map of the Drosophila
melanogaster genome using these BACs. For further information
please see http://www.fruitfly.org The BDCP Drosophila
melanogaster BAC library was prepared by Kazutoyo Osoegawa and
Aaron Mammoser in Pieter de Jong's laboratory in the Department of
Cancer Genetics at the Roswell Park Cancer Institute in Buffalo,
NY. The library is named RPCI-98 and was constructed by partial
EcoRI digestion of Drosophila DNA provided by the BDGP from the
isogenic strain y2; cn bw sp, the same strain used for the BDGP's
Pl and EST libraries. A more detailed description of the library
and how to order individual BAC clones, the entire library, or
filters for hybridization from the BACPAC Resource Center can be
found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Submitted (02-JUN-1999) Genoscope - Centre National de Sequencage BP 191 91006 EVRY cedex - FRANCE (E-mail : seqref@genoscope.cns.fr

Determination of this BAC-end sequence was carried out as part of collaboration with the Berkeley Drosophila Genome Project (BDGP). The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Osoegawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial ECORI digestion of Drosophila DNA provided by the BDGP from the isogenic strain v2; cn bw sp, the same strain used for the BDGP's pl and bow to order individual BAC clones, the entire library or filters for hybridization from the BACPAC Resource Center can be found at http://Dacpac.med.buffalo.edu/drosophila_bac.htm.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  BE288474 562 bp mRNA EST 26-OCT-2000 601095732F1 NCI_CGAP_Mam5 Mus musculus cDNA clone IMAGE:3490423 5', mRNA sequence.

Determination of this BAC-end sequence was carried out as part of a collaboration with the Berkeley Drosophila Genome Project (BDGP).

The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazucoyo Oscegawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Carlitute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial ECORI digestion of Drosophila DNA provided by the BDGP from the isogenic strain v2: on bw sp, the same strain used for the BDGP's pl and how to order individual BAC clones, the entire library or filters for hybridization from the BACPAC Resource Center can be found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.

Determination of this BAC-end sequence was carried out as part of a collaboration with the Berkeley Drosophila Genome Project (BDGP). The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Oscegawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswall Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial EcoRI digestion of Drosophila DNA provided by the BDGP from the isogenic strain y2; on bw sp, the same strain used for the BDGP's and how to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.

using a method described by Clark and Diamond (Clark, C.G., and Diamond, L.S. (1993) Entamoeba histolytica: a method for isolate identification. Exp. Parasitol. 77:450.). The DNA was mechanically sheared to give a tight size distribution (-2 kb). The v + i method used for the library construction is described in detail in Smith, H.O. and Venter, J.C. (Making small insert libraries for whole genome shotgun sequencing projects. In Genome Sequencing: A Practical Approach, eds. M. Vaudin and B. Barell, Oxford University Press, 1999)."

/note="Vector: pHOSI; Site__1: Bit I; Constructed at The Institute for Genomic Research (TIGR), Rockville, MD. Genomic DNA isolated from broth cultures of E. histolytica using a method described by Clark and Diamond (Clark, C.G., and Diamond, L.S. (1993) Entamoeba histolytica: a method for isolate identification. Exp. Parasitol. 77:450.) The DNA was mechanically sheared to give a tight size distribution (-2 kb). The v + i method used for the library construction is described in detail in Smith, H.O. and Venter, J.C. (Making small insert libraries for whole genome shotgun sequencing projects. In Genome Sequencing: A Practical Approach, eds. M. Vaudin and B. Barell, Oxford University Press, 1999)."

                                                                                                                                                                                                                                                                                                                                                                               NOTE: This is a 'working draft' sequence. It currently consists of 26 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

                                                                                              A novel method has been developed for detecting the splicing defect in the dihydropyrimidine dehydrogenase (DPD) gene. The method comprises determining whether genomic DNA containing the DPD gene has a wild-type intron-exon boundary for an exon that encodes amino acids (aa) 581-635 of the corresponding DPD protein. The present sequence represents a DPD genomic fragment which encodes the amino acids 581-635. The method is used specifically to determine sensitivity of subjects to the anticancer agent 5-fluorouracil, which is dangerously toxic to those with DPD defects. It can also be used to diagnose DPD-deficiency
                                                                                                                                                                                                                                                                                                                                                                                                                               AATTTATCTGGAGCTAACAATACTTTATTTTACCTTTTTATTTGCAAGTAGTTTATGTT 120

This MAD is used as immunoassay reagents to identify a lack of DPD in a patient and to assess the sensitivity of cancer patients to treatment with antitumor agents of the 5-fluorouracil (5-FU) type. The MAD can also be used for affinity purification of DPD. DPD is involved in reduction of 5-FU (and related catabolites and derivatives) and lack of it is associated with increased toxicity of this type of antitumor agent. It has specific binding interaction. The MAD provide a sensitive and reliable test for DPD,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   780
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    244 CICAATATCTTTACTCTTTCATGAGGACATTGTGACAAATGTTTCCCCCATAATCATCCG 303

The DPD gene, DPYD, is located at chromosome 1p22. The cDNA can be inserted into a vector and used for prodn. of DPD (AAR91420) in transformed host cells, or used as a selectable marker that functions in prokaryotic and eukaryotic cells. It can also be utilised as a probe to detect DPD deficiency in an individual, i.e. to identify risk of toxic reaction to 4-fluorouracil.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Bovine; liver; human; dihydropyrimidine dehydrogenase; DPD; pyrimidine catabolism; 5,6-dihydropyrimidine; pyrimidine analogue; fluoropyrimidine; anticancer drug; 5-fluorouracil; FUra; cancer;

This sequence represents the DNA sequence encoding human dihydropyrimidine dehydrogenase (DPD). DPD catalyses the initial and rate limiting step in pyrimidines. DPD catalyses the initial pyrimidines to 5.6-dihydropyrimidines. DPD is a complex enzyme consisting of two identical subunits, containing FMN. FAD and ironsulphur centers, and utilising NADPH as a cofactor. DPD has also been shown to catalyse the reduction of various pyrimidine analogues including the fluoropyrimidine anticancer drug 5-fluorouracil (FUra). Up to 85% of administered FUra may be catabolised by DPD, and it therefore governs the effectiveness of FUra as an anticancer drug. DPD genes or fragments of them may be used in the detection of DPD in a sample, esp. isolated from a cancer patient. According to the amount of DPD detected, a therapeutically effective amount of FUra may be determined and administered. DPD deficiency, leading to lifethreatening toxicity on exposure to FUra, in a human caused by a frameshift mutation may be determined by means of a molecular biological assets.

This sequence represents the CDNA sequence encoding human dihydroperase (DPD). This sequence was amplified using the primer sequences given in AAT031447. DPD catalyses the initial catalyses the initial catalyses the initial primedione catabolism, the reduction of pyrimidines to 5,6-dihydropyrimidines. DPD is a complex enzyme consisting of two identical subunits, containing FWN. FND and isoben subpur centers, and utilising NADPH as a cofactor. DPD has also been shown to catalyse the reduction of various pyrimidine analogues including the fluoropyrimidine anticancer drug 5-fluoropyrimidine anticancer drug. Up to 85% of administered FUra may be catabolised by DPD, and it therefore governs the effectiveness of FUra as an anticancer drug. DPD genes or fragments of them may be used in the detection of DPD in a sample, esp. isolated from a cancer patient. According to the amount of DPD detected, a therapeutically effective amount of FUra may be determined and administered. DPD deficiency, leading to lifethreatening toxicity on exposure to FUra, in a human caused by a frameshift mutation may be determined by means of a molecular biological assay to detect the deletion of an A residue at codon 318 within the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   1824 gggaaccacctctggccccatgtatggccctggacaaagctcctttctgaatattgagct 1883
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          1764 caccaaaactttctctcttgataaggacattgtgacaaatgtttcccccagaatcatccg 1823

This sequence represents the cDNA sequence encoding bovine liver dihydropyrimidine dehydrogenase (DPD). This sequence was isolated using the primers given in AAT03134-41 and AAT14638. DPD catalyses the initial and rate limiting step in pyrimidine catabolism, the reduction of pyrimidines to 5,6-dihydropyrimidines. DPD is a complex enzyme consisting of two identical subunits, containing FMN, FAD and iron-
